Gen AI for Design Thinking

User Persona

Instruction

You will be **creating a detailed user persona profile** to support user-centered design for an innovative product that I am building in the fintech space.

Your task is to organize and present these insights in a structured persona template as described below. The user persona is someone who deals with this specific challenge:

[insert challenge statement]

Please use the following sections and insert the relevant details:

Demographics

- **Age:** [Insert age, e.g., "35 years old"]
- **Gender:** [Insert gender, e.g., "Female"]
- **Location:** [Insert location, e.g., "NCR"]
- **Family:** [Insert family situation, e.g., "Single, living alone with little sister"]
- **Occupation:** [Insert job role, e.g., "Software Engineer"]
- **Income Level:** [Insert income level, e.g., "70,000 PHP/month"]

Psychographics

- **Personality Traits:** [Insert traits, e.g., "introverted, detail-oriented"]
- **Values:** [Insert values, e.g., "environmental sustainability, work-life balance"]
- **Hobbies/Interests:** [Insert hobbies, e.g., "hiking, reading, and yoga"]

Underlying Thoughts

- **Key Considerations:** [Insert thoughts, e.g., "I often think about how I can balance convenience and sustainability."]
- **Emotional Drivers:** [Insert emotions, e.g., "Feels proud when making eco-friendly choices."]

Sources of Influence

- **Inspiration/Influences:** [Insert sources, e.g., "Brands that are transparent about sustainability efforts."]
- **Key Information Channels:** [Insert channels, e.g., "Social media, blogs, and online reviews."]

Alternatives

- **Substitute Solutions:** [Insert alternatives, e.g., “DIY solutions instead of buying products.”]
- **Competitors:** [Insert competitors, e.g., “Other meal delivery services focusing on convenience.”]

Technology Behavior

- **Platforms Used:** [Insert platforms, e.g., “Instagram, TikTok, Amazon.”]
- **Usage Patterns:** [Insert patterns, e.g., “Spends 3+ hours daily researching eco-friendly products online.”]

Needs/Aspirations

- **Goals:** [Insert aspirations, e.g., “Wants to make sustainable living more accessible for their family.”]
- **Unspoken Needs:** [Insert needs, e.g., “An easy way to compare environmental impact of different brands.”]

Pains

- **Challenges:** [Insert challenges, e.g., “Struggles to find affordable eco-friendly options.”]
- **Barriers to Action:** [Insert barriers, e.g., “Limited time and high costs.”]

Quantitative Data

- **Identify what relevant quantitative data about the user base could be used to augment this persona.**

Instructions:

- Fill in each section based on the provided information or data.
- Write in third-person, describing the persona and their characteristics (e.g., “She values sustainability and prefers brands that are transparent in their practices”).
- Where data is missing, extrapolate.

Stretch - Basic Primer Stakeholder Simulation

###Instruction###

You will be roleplaying as one of my users in order to help me better understand the challenge. I will share a challenge statement and user persona. Please use them to provide me with a basic primer and introduction to the following topic/challenge statement:

[insert challenge statement]

The primer must be delivered from the perspective of the following user persona:

[insert user persona]

###Guidance###

Emphasize Realism and Consistency:

Ensure that all responses are consistent with the demographic, psychographic, and behavioral attributes provided. Avoid deviating from the persona's defined characteristics.

Engage Authentically in Scenarios:

When asked about specific situations (e.g., interacting with a product or responding to an advertisement), provide responses that reflect the persona's goals, challenges, and decision-making style.

Reference Quantitative Data:

Incorporate insights from internet research.

Avoid Overgeneralization:

While embodying the persona, avoid making overly broad claims. Remain focused on the specific attributes and preferences provided in the prompt.

Stretch - Empathy Map

Context:

You are helping a product team deeply understand their end user's mindset, emotions, and motivations in order to inform design and messaging decisions.

Target User Persona:

Create the empathy map for the following user persona: [insert target user persona]

Role:

You are a seasoned UX researcher and empathy-mapping expert with experience in human-centred design.

Asks:

- Use the classic empathy-map framework with six quadrants:
 1. Says
 2. Thinks
 3. Does
 4. Feels
 5. Pains
 6. Gains
- Present each quadrant as a bullet-list of concise, first-person insights (no more than 8 words each).
- Output in a Markdown table, with each column titled by the quadrant name.

Task:

Generate a complete empathy map for the provided user persona. Pull directly from that persona's attributes, quotes, goals, frustrations, and context to populate each quadrant.

Research Hypotheses

Context

You are designing a product research program prior to the design phase around the challenge: **[insert challenge statement]**

This is for the following target user persona: **[insert persona]**

Leadership needs a crisp set of testable **research hypotheses** that illuminate (a) users' most acute pain points, (b) why those pains remain unsolved, and (c) where emerging technologies—especially AI—might unlock new value.

Role

Act as a **Senior User-Research Strategist** with expertise in product discovery, user-experience diagnostics, and technology-driven innovation.

Asks

1. **Generate 12–15 concise research hypotheses** that can be validated or invalidated during market research.
Organize them under **five thematic headings** (use these exact headings):
 - **Pain-Point Prevalence & Severity**
 - **Root Causes & Unsolved Barriers**
 - **Emerging-Technology Opportunities (AI & Beyond)**
 - **Stakeholder & Ecosystem Dynamics**
 - **Adoption Feasibility & Risk Mitigation**
2. **Structure for each hypothesis** (≤ 60 words):
 - **Hypothesis:** One clear, falsifiable statement (e.g., “>50% of delays are caused by access issues”).
3. Use **Markdown**. Number hypotheses sequentially under each heading. Avoid focus on pricing or willingness-to-pay; keep the lens on pain, root causes, and tech opportunities.

Task

Produce the complete list of hypotheses, formatted as requested, ready to slot into the market-research plan.

Research Plan

Context

You are scoping a rigorous market-research initiative to guide product-design decisions for the following brief:

[insert challenge statement]

This is part of a hackathon, so we need to get information fast to be able to design and prototype a potential solution for this challenge statement for the following target user persona:

[insert user persona]

Role

Act as a senior Market Research Lead with a background in both qualitative UX research and quantitative market analysis, fluent in lean startup and design-thinking principles, and accustomed to turning raw insight into product direction. Adapt the research plan to be possible for a small team participating in a hackathon.

Asks

- **Scope & Objectives** – Articulate precise research goals that cover:
 1. **Scale of the challenge** (total addressable market, affected user segments, trend trajectory).
 2. **Major actors** (competitors, suppliers, regulators, influencers, adjacent industries).
 3. **Existing solutions** (products, services, work-arounds), including performance, pricing, positioning, and adoption barriers.
- **Methodology** – Recommend a mixed-methods approach (desk research, expert interviews, user ethnography, surveys, data scraping, etc.), specifying when to use each, sample sizes, and key metrics, but keep it feasible for a small team.
- **Source Plan** – List priority secondary databases, trade publications, analyst reports, and public data sets; outline criteria for selecting interviewees or survey cohorts.
- **Timeline & Resourcing** – Provide a phased schedule with estimated effort, roles needed, and critical dependencies. It should be possible carry out in a few days.
- **Risk & Mitigation** – Flag likely research pitfalls (e.g., data gaps, recruitment bias) and how to address them.
- **Deliverables** – Define concrete outputs (market-size model, competitor matrix, jobs-to-be-done map, insights deck) and decision gates.
- Format the plan in clear sections with concise bullets; bold key headers; keep actionable detail front-and-center; cite example metrics or templates where helpful.

Task

Generate a full market-research plan that satisfies all asks, tailored to the provided challenge statement, ready for immediate review by product leadership.

Interview Guide Creation

Context:

I'm preparing to conduct user research to inform the design of a solution for the following challenge: **[insert challenge statement]**

Audience:

This interview guide will be used by UX researchers and product-team members who will recruit the interviewee and moderate the sessions. The intended interviewee is: **[insert user persona]**

Style:

Professional and concise, with a neutral, conversational tone. Questions should be open-ended, easy to understand, and include suggested follow-up probes.

Task:

Generate a comprehensive interview guide that includes:

1. **Research objectives:** Clear goals of what we want to learn.
2. **Introduction & consent script:** A friendly welcome, purpose statement, confidentiality reminder, and consent check.
3. **Warm-up questions:** Simple, rapport-building prompts.
4. **Core questions:** 8–10 primary questions directly tied to the challenge, each with 2–3 suggested follow-up probes.
5. **Closing questions & wrap-up:** Opportunity for any final thoughts and thank-you script.

SCAMPER Ideation

Context:

You are facilitating a live brainstorming workshop to generate innovative solutions to the following challenge:

[insert challenge statement]

Assume you already have access to the full profile of our target user persona.

Roles (to be simulated as three distinct speakers, each with a fun name):

1. **Target User Persona** [insert target user persona]
2. **AI & Innovation Expert** – a seasoned researcher in AI-driven product innovation, skilled at applying creative frameworks to real-world problems.
3. **Bank Executive** – a senior leader at a financial institution, deeply attuned to risk, compliance, customer needs, and operational constraints.

Asks / Constraints:

- Structure the session strictly around the **SCAMPER** framework, moving through each step in order:

1. **Substitute**
2. **Combine**
3. **Adapt**
4. **Modify** (also consider Magnify/Minify)
5. **Put to another use**
6. **Eliminate**
7. **Reverse**

- For **each** SCAMPER step, **each** persona must propose at least one idea.

- Simulate the dialogue as if they're in the same room:

- Label each turn clearly, e.g.

...

Target User Persona: "..."

AI & Innovation Expert: "..."

Bank Executive: "..."

...

- Encourage dynamic interaction: ask questions, build on each other's suggestions, raise concerns, and propose refinements.

- At the end, provide a **concise summary** (3–5 bullet points) of the top 3–5 ideas that emerged, highlighting which SCAMPER step they came from.

Task:

Generate the full, play-by-play brainstorming dialogue covering all seven SCAMPER steps, followed by the summary of the strongest ideas.

Stretch - Jobs-to-Be-Done

###Context###

I'm exploring ways to design creative solutions for the following challenge statement:

[insert challenge statement]

I'm particularly keen on understanding how to use the Jobs-to-Be-Done (JTBD) framework and human-centered design thinking to uncover latent problems and inefficiencies that may be affecting my team.

###User###

This is for the following user persona:

[insert target user persona]

###Framework###

You are an expert in the Jobs-to-Be-Done framework and human-centered design thinking, with vast experience in fintech and customer service. You will use this framework to unearth hidden issues and co-create innovative solutions through collaborative methods. Your goal is to guide me in identifying challenges within my team using the JTBD approach and to strategize ways to address them effectively.

###Task###

Kindly present me with probing questions (one at a time) that employ the JTBD framework and human-centered design thinking. These questions should aid in unraveling hidden challenges and pain points within my managerial purview.

Once I've provided responses to five questions, please 1) synthesize a concise analysis of my answers and 2) recommend tangible steps rooted in design thinking to address and overcome these challenges.

Stretch - Brainwriting Ideation

Role: You are an AI-powered brainstorming assistant skilled at generating innovative ideas for digitally transforming operations using AI and emerging technologies.

Intent:

You will be participating in a brainwriting exercise with me, where you will act as an advisor for generating ideas. I will be sharing with you the previous ideas, then you will help me to expand on it by providing 10 additional ideas: 5 conventional and 5 very original and out of the box. These ideas should align with our company's goals and activities while integrating AI or other emerging technologies wherever possible.

Context:

Our company is embarking on an ideation session to explore transformative opportunities. The goal is to enrich decision-making by generating actionable and creative ideas to leverage AI for digital transformation. The target audience is my company's leadership. These ideas should address operational challenges, improve efficiency, and align with our long-term vision. You will begin this exercise by asking me about the current product that I am working on.

Constraints:

1. Ideas must be applicable to improving the current product.
2. You will first ask me about the current product. Only do this once for calibration. For all future requests, use the current product.
3. Ideas should consider applications of AI or other emerging technologies whenever possible.
4. Conventional ideas may not necessarily need emerging technologies.
5. Very original ideas should be bold, innovative, or unconventional while remaining feasible within the scope of emerging technologies.
6. Ideas must consider the target audience and context of a forward-thinking organization.

Proposal Drafting - Part 1

Context

I have a rough **idea** for a new product or service that addresses the following challenge:

[insert challenge statement]

This is for the following user persona:

[insert user persona]

You need to turn that idea into a concise written **pitch** using the competition's required template so teammates, mentors, and judges can quickly grasp its value.

Role

Act as an **experienced startup pitch writer** with a knack for turning raw ideas into clear, compelling narratives that resonate with investors and innovation-challenge juries.

Asks

1. Structure the output under **exactly these section headings** (in this order):
 1. **Problem Statement** – Briefly describe the Job-to-be-Done and the specific pain your idea addresses, anchored to the track's problem statements.
 2. **Solution Description & Implementation Plan** – Explain how the solution works, its key features, what makes it unique, and a high-level plan for building/deploying it. Highlight how it empowers MSMEs, promotes fairness, or sparks positive action.
 3. **Target Audience** – Identify primary users and their defining characteristics (company size, role, context).
 4. **Key Metrics for Success** – List quantitative or qualitative metrics you'll track (e.g., user engagement, financial lift for MSMEs, social-impact indicators).
2. Keep each section to **≤150 words**; use crisp sentences or bullets where helpful.
3. Avoid jargon; write so a non-technical judge can follow.

Preliminary Research:

Please include the following insights from my preliminary research:

[insert market research]

Task

Take the idea provided below and generate the full pitch, following all asks:

[insert idea]

Proposal Drafting - Part 2

Context

My pitch already covers Sections 1–4 (Problem Statement, Solution Description & Implementation Plan, Target Audience, Key Metrics). You now need to add technical depth so engineers and technical reviewers can judge feasibility.

Pitch

[Copy final version of sections 1-4]

Role

Act as a **Senior Solutions Architect** skilled in cloud-native development, AI/ML integration, and data-governance best practices for MSME-focused products.

Asks

1. Create two new sections—numbered to follow the original template:

5. Technology Stack

- Bullet the front-end, back-end, AI/ML, infrastructure, DevOps, and third-party services/tools you'll use.
- Briefly justify each choice (e.g., scalability, cost-efficiency, local compliance).

6. Data Requirements

- Specify the datasets needed, their sources (public APIs, partner feeds, first-party collection), expected volume/format, refresh cadence, and any privacy/ethics considerations.

2. Keep each section **≤200 words**; use clear bullets or short paragraphs.
3. Ensure the stack and data plan align logically with the Solution Description, Target Audience, and success metrics you already defined.

Task

Write Sections 5 and 6 (“Technical Details”) for the existing pitch, following all asks above.

Proposal Drafting - Part 3

Context

My pitch covers Sections 1–6 (Problem, Solution, Implementation, Audience, Metrics, Technical Details). Reviewers next need a clear-eyed look at the project's vulnerabilities—technical, operational, and ethical—plus concrete mitigation tactics.

Pitch

[Copy final version of sections 1-6]

Role

Act as a **Risk & Compliance Lead** for the Philippines with expertise in cybersecurity, data privacy (e.g. Republic Act No. 10173/Data Privacy Act of 2012), AI governance, and bank operations.

Asks

1. Draft **Section 7. Challenges and Risks**, using two sub-headers:
 - **Key Challenges & Risks** – Bullet the top 5-8 risks spanning technical debt, uptime, talent, regulatory hurdles, data privacy/security, consent, algorithmic bias, IP, go-to-market, funding, and partner reliance.
 - **Mitigation Strategies** – For each risk, give a 1-sentence countermeasure (policy, process, tech control, timeline buffer, contingency plan).
2. For privacy/security/bias issues, cite at least one specific mitigation best practice or framework (e.g., ISO 27001, privacy-by-design, model fairness audits).
3. Keep the entire section **≤250 words**.
4. Ensure risks align logically with the tech stack, data plan, and audience we already defined.

Task

Produce Section 7 (“Challenges and Risks”) for the existing pitch, following all asks above.

Presentation

Storyboard Drafting

Context:

You are an expert in storytelling and communication, tasked with helping hackathon teams craft a narrative storyboard for a 10-minute video pitch. The pitch will showcase a prototype concept at the BPI Data Wave Hackathon, demonstrating its innovation, value, and feasibility in a way that resonates with both business/finance and technical judges.

Audience:

Hackathon judges with mixed backgrounds:

- **Business & Finance Experts** who look for clear value propositions, market potential, and ROI.
- **Technical Professionals** who seek sound architecture, data integrity, and technical feasibility.

Style:

Your narrative must be:

- **Clear & Compelling:** Hook in the first 15–30 seconds.
- **Concise & Structured:** Divide the 10 minutes into focused segments.
- **Visually-Driven:** Recommend slide visuals, data charts, or demo snippets.
- **Balanced:** Blend high-level impact with enough technical depth.
- **Action-Oriented:** Build toward a memorable call to action.

Task:

1. Request Inputs

Prompt the user to supply:

- **Prototype Concept & Proposal:** A one-paragraph summary of the problem, solution, target users, and unique value.
- **Key Features & Metrics:** Any performance data, usage stats, market size, or pilot results.
- **Desired Visuals/Slides:** Branding guidelines, mockups, charts, images, or live demo ideas.
- **Call to Action:** What you want from judges at the end (e.g., funding, pilot partnership, mentorship)

2. Turn Inputs into a Storyboard

Using their responses, generate a scene-by-scene breakdown of a 10-minute pitch.

For each segment include:

- **Duration:** Allocate a clear time window.
- **Narrative Voiceover/Text:** Key talking points and transitions.

- **Visuals/Slides:** What to show—images, data charts, UI mockups, or live demo clips.
- **Data Emphasis:** Highlight the most persuasive metrics or KPIs.
- **Emotional & Logical Hooks:** How to connect emotionally, then back it up with logic/tech.
- **Call to Action Placement:** Build tension toward your final ask and specify how to deliver it.

3. Storyboard Segments (Example Structure)

- **1. Hook (0:00–0:30):** Start with a compelling question or pain point.
- **2. Problem Statement (0:30–1:30):** Quantify the issue with real-world data.
- **3. Solution Overview (1:30–3:00):** Introduce your prototype; show a high-level demo or mockup.
- **4. Value Proposition (3:00–4:30):** Market size, ROI potential, user benefits—backed by metrics.
- **5. Technical Deep-Dive (4:30–6:00):** Architecture, data flows, security, scalability.
- **6. Business Model & Go-to-Market (6:00–7:30):** Revenue streams, partnerships, adoption strategy.
- **7. Roadmap & Milestones (7:30–8:30):** Next steps, technical roadmap, validation plan.
- **8. Team & Credentials (8:30–9:00):** Who you are, relevant expertise, why you can execute.
- **9. Call to Action & Close (9:00–10:00):** Reinforce impact, make your ask, end on a memorable note.

4. Iterations & Feedback

Suggest how to refine the storyboard based on time checks and judge feedback—for example, trimming technical detail if over time, or adding a stronger emotional hook if early feedback is lukewarm.

Example:

User provides:

- Prototype: “An AI-driven cash-flow forecasting dashboard for SMEs.”
- Metrics: “Pilot with 50 SMEs showed 20% reduction in liquidity gaps.”
- Visuals: “Mockups of dashboard UI, line chart of forecast vs. actual, company logo.”
- Ask: “Seed funding of PHP 2 million and pilot partners.”

AI Response (Storyboard Snippet):

- **Hook (0:00–0:30):** “What if your business never ran out of cash on a slow month?”
 - *Visual:* Full-screen stat: “40% of Filipino SMEs suffer cash crunch each quarter.”
- **Problem (0:30–1:30):** “Meet Maria, whose café had to cut staff last June...”
 - *Visual:* Photo of café, overlay of cash-flow spike and crash chart.
- ...and so on, culminating in a “Call to Action” slide: “Join us to pilot and plug your cash leaks—let’s secure your tomorrow, today.”

Pitch Review Prompt

Context:

You are an expert pitch-review consultant channeling a panel of hackathon judges. Your goal is to thoroughly critique an existing 10-minute video pitch for the BPI Data Wave Hackathon, identifying where business/finance experts and technical reviewers might raise objections or doubts.

Audience:

- **Business & Finance Judges:** Seeking clear ROI, market fit, revenue model viability, and risk mitigation.
- **Technical Judges:** Seeking sound architecture, data quality, security, scalability, and feasibility.

Style:

- **Constructive & Specific:** Name each concern clearly and back it up with “why it matters.”
- **Categorized:** Separate business/finance vs. technical concerns.
- **Actionable:** For each concern, suggest one concrete way to address or pre-empt it in the pitch.

Task:

1. Request Inputs

Ask the user to paste or attach:

- Their full **pitch script** or **storyboard** (narration text, slide notes).
- A summary of any **key visuals** or **data charts** used.
- The **main data points/metrics** they highlight.
- Their current **call to action** wording.

2. Analyze & Surface Concerns

– Step A: Business/Finance Concerns

- List the top 3–5 objections or questions judges in this category will likely have (e.g., unclear monetization, market size too small, ROI timeline too long).
- For each, explain *why* it could undermine buy-in.
- Propose a precise change or addition to the pitch to resolve it (e.g., “Add a slide showing 5-year revenue projections with break-even in year 2.”).

– Step B: Technical Concerns

- List the top 3–5 technical hesitations (e.g., data privacy risks, unproven scalability, integration complexity).
- Explain *why* judges will flag each.
- Recommend how to address it (e.g., “Include a brief architecture diagram with encryption layers and compliance standards called out.”).
